

Microencapsulated Conjugated Linoleic Acid

Cat. No. EXTZ-807

Lot. No. (See product label)

Introduction

Description

Microencapsulated Conjugated Linoleic Acid (CLA) is a free-flowing powder product produced by encapsulating conjugated linoleic acid within a protective matrix using spray-drying microencapsulation technology. This process effectively addresses the inherent challenges of CLA including susceptibility to oxidation, poor stability and unpleasant taste, while significantly improving its handling properties and shelf life. CLA is a naturally occurring fatty acid isomer known for its benefits in body fat reduction, lean muscle preservation, immune function enhancement and cardiovascular health, widely used in dietary supplements, functional foods and sports nutrition products.

Product Information

Form

White to off-white free-flowing powder

Storage and Shipping Information

Storage

Store in cool, dry place; avoid heat and direct sunlight
