

Rasburicase

Cat. No. RGZ-001

Lot. No. (See product label)

Introduction

Description Rasburicase is a recombinant urate oxidase that catalyzes the oxidation of uric acid to the more soluble product allantoin.

Applications Suitable for research on severe hyperuricemia associated with tumor lysis syndrome and refractory gout.

Product Information

Appearance White to off-white.

Form Sterile lyophilized powder

CAS No. 134774-45-1

Purity $\geq 95.0\%$

Specificity Specifically degrades uric acid.

Function Catalyzes the oxidation of uric acid to allantoin, which has higher solubility.

Substrates Uric acid

Reaction Uric acid is oxidized to allantoin.

Usage and Packaging

Package 1 mg 5 mg 10 mg

Storage and Shipping Information

Storage Store under the lot-specific conditions stated in the Certificate of Analysis.

Shipping Conditions Room-temperature shipping; conditions may vary by destination.
