

o-Anisidine Oily Liquid Intermediate

Cat. No. CEGZ-6041

Lot. No. (See product label)

Introduction

Description	o-Anisidine is a medical intermediate and chemical reagent supplied as a light red or yellowish oily liquid that turns light brown when exposed to air.
Applications	Medical intermediate use; chemical reagent use; organic synthesis.
Synonyms	o-Anisidine

Product Information

Appearance	Light red or yellowish oily liquid; turns light brown when exposed to air
Form	Liquid
CAS No.	90-04-0
Molecular Formula	C ₇ H ₉ NO
Molecular Weight	123.15 g/mol
Melting Point	3-6 °C
Boiling Point	225 °C
Refractive Index	1.5730
Density	1.092 g/mL at 20 °C
