

DL-2-Aminobutyramide Intermediate Liquid

Cat. No. CEGZ-6066

Lot. No. (See product label)

Introduction

Description	DL-2-aminobutyramide is a pharmaceutical-intermediate material supplied as a colorless to light yellow liquid for intermediate synthesis applications.
Applications	Used mainly to produce L-2-aminobutanamide hydrochloride.
Synonyms	DL-2-Aminobutyramide

Product Information

Appearance	Colorless to light yellow liquid
Form	Liquid
CAS No.	53726-14-0
Molecular Formula	C ₄ H ₁₀ N ₂ O
Chemical Name	DL-2-Aminobutyramide
Molecular Weight	102.14
Purity	DL-2-aminovaleramide: ≥60% by external standard
Contaminants	Water: ≤35% Residue on ignition: ≤1.5%
Boiling Point	246°C
Density	1.027

Usage and Packaging

Package	25 kg/plastics drum
