

DL-Pantolactone Synthetic Intermediate

Cat. No. CEGZ-6068

Lot. No. (See product label)

Introduction

Description	DL-pantolactone is a medical-intermediate crystalline powder used for synthesis of DL-calcium pantothenate and related derivatives.
Applications	Used for synthesis of DL-calcium pantothenate and its derivatives; also described as an intermediate of pantothenic acid and for other organic synthesis.
Synonyms	DL-Pantolactone

Product Information

Appearance	White to yellowish crystalline powder; basic information also lists white crystalline powder
Form	Crystalline powder
CAS No.	79-50-5
Molecular Formula	C ₆ H ₁₀ O ₃
Chemical Name	DL-Pantolactone
Molecular Weight	130.1418
Grade	Medical Intermediate

Usage and Packaging

Package	25 kg/bag/drum
----------------	----------------

Storage and Shipping Information

Storage	Store in a cool, dry place and in a tightly closed container.
