

β-Enolase from Human, Recombinant

Cat. No. NATE-0941

Lot. No. (See product label)

Introduction

Description Beta-enolase, also known as ENO3, is one of the three enolase isoenzymes found in mammals. This isoenzyme, a homodimer, is found in skeletal muscle cells in the adult. ENO3 play a role in converting phosphoglyceric acid to phosphoenolpyruvic acid in the glycolytic pathway. Mutations in its gene can be associated with metabolic myopathies that may result from decreased stability of the enzyme. Recombinant human ENO3 protein, fused to His-tag at N-terminus, was expressed in E.coli and purified by using conventional chromatography techniques.

Synonyms 2-phospho-D-glycerate hydro-lyase; Beta-enolase; ENO3; Enolase 3; Muscle-specific enolase

Product Information

Species Human

Source E. coli

Form Liquid; 0.5 mg/mL solution in 20 mM Tris-HCl (pH 8.0) containing 1 mM DTT, 20% glycerol and 0.1 mM NaCl.

Molecular Weight 49 kDa

Purity > 95% (SDS-PAGE)

Storage and Shipping Information

Storage Store at -70°C.
