Gamma-Aminobutyric Acid Biochemical Material

Cat. No. CEGZ-6297

Lot. No. (See product label)

Introduction

Description	Gamma-aminobutyric acid is an aminobutyric acid derivative supplied as a biochemical raw material.
Applications	Formulation and research applications relate to reducing blood ammonia and promoting cerebral metabolism, and also references use in preparations associated with hepatic coma, post-cerebrovascular sequelae, cerebral arteriosclerosis, head-injury sequelae, and carbon-monoxide-related coma.
Synonyms	Gamma-aminobutyric acid; GABA; 4-Aminobutyric acid

Product Information

CAS No.	56-12-2
Molecular Formula	C4H9NO2
Chemical Name	4-Aminobutyric acid
Molecular Weight	103.1198
Notes	EINECS: 200-258-6.
