Aluminum Synthetic Tanning Agent

Cat. No. CEGZ-6341

Lot. No. (See product label)

Introduction

Description	An anionic aluminum tanning agent supplied as a yellow-green liquid for leather tanning and retanning.
Applications	Suitable for tanning and retanning white leather, fur, and glove leather.

Product Information

Appearance	Yellow-green liquid.
Form	Liquid
Composition	Aluminum tanning agent.
Solubility	Compatible with chrome tanning liquor.
Quality	Aluminum oxide (Al2O3): ≥25%. pH (10% solution): 3.5 ± 1. Charge: anionic.
Usage	For initial tanning and retanning, control pH at approximately 3.3-3.5. Recommended dosage: 2-6%. For over-dyeing, after draining and changing the bath, a 1.5% addition can help absorption and fixation of other tanning and resin components in the leather.

Usage and Packaging

Package	50 kg plastic drum.

Storage and Shipping Information

Storage	Store in a cool, dry place. Shelf life: 6 months.
Shipping Conditions	Non-hazardous; may be transported as general cargo.
