Enteric-Coated NMN Granules

Cat. No. CEGZ-6462

Lot. No. (See product label)

Introduction

Description	Enteric-Coated NMN Granules contain approximately 70% NMN in a double-layer barrier-coated form designed to limit gastric release and promote intestinal delivery.
Applications	NAD+-related nutrition Vitality-support formulations Healthy-aging nutrition Premium nutraceutical and dietary-supplement products

Product Information

Appearance	White granules
Form	Enteric-coated granules
Concentration	NMN: approximately 70%
pH Stability	pH 1.2: 7.45% released after 2 hours pH 6.8: cumulative release reaches 83.98%
Structure	Double-layer barrier coating
Function	Enteric delivery of an NAD+ precursor
Grade	Nutraceutical formulation grade
Advantages	Low gastric release High intestinal release Enteric and sustained-release profile
