

Bovine Ovary Powder

Cat. No. EXTZ-914

Lot. No. (See product label)

Introduction

Description

Bovine Ovary Powder is a freeze-dried glandular powder prepared from fresh, inspected bovine ovarian tissue. Low-temperature freeze-drying gently removes moisture while preserving the natural matrix of proteins, peptides, amino acids, lipids, and trace minerals characteristic of ovarian tissue. The result is a brownish-yellow fine powder with a characteristic odor, good flowability, and stable shelf life. Following the traditional glandular nutrition concept, bovine ovary powder is used as a whole-food-style raw material in women's wellness and glandular supplement formulations, including capsules, tablets, and powder blends, and can be combined with other organ powders in multi-glandular formulas. The material is non-GMO, produced without chemical solvents, and controlled for moisture, ash, heavy metals, and microbiological quality.

Applications

Food

Product Information

Species

Bos taurus

Source

Bovine ovarian tissue, freeze-dried

Appearance

Brownish-yellow fine powder

Form

Powder

Solubility

Partly dispersible in water

Storage and Shipping Information

Storage

Store in a tightly sealed container in a cool, dry place, protected from light
