Sodium Triacetoxyborohydride

Cat. No. CEGZ-6561

Lot. No. (See product label)

Introduction

Description	Sodium triacetoxyborohydride is a mild, selective reducing reagent used in reductive amination and carbonyl reduction reactions.
Applications	Selective reducing agent for reductive aminations and carbonyl reductions in organic synthesis.

Product Information

Appearance	white crystalline powder
CAS No.	56553-60-7
Molecular Formula	C6H10BNaO6
Molecular Weight	211.94 g/mol

Usage and Packaging

Package	Available upon request

Storage and Shipping Information

Storage	Store in a cool, dry place under inert atmosphere; moisture-sensitive.
