

FAS Inhibitor, C75

Cat. No. CEI-0481

Lot. No. (See product label)

Introduction

Description

Inhibitor of fatty acid synthase (FAS) reducing food intake and body weight in mice. Exhibits irreversible slow-binding biphasic inactivation of FAS. Down regulates neuropeptide Y and Agouti-related protein expression. Has been proposed to activiate CPT-1 activity in liver and adipose tissue, leading to increased fatty acid oxidation and energy production. Shows significant in vivo antitumor activity in human breast cancer cells. Suppresses DNA replication and induces apoptosis. FAS inhibition by C75 leads to dramatic accumulation of the CDK inhibitor p27KIP1 from cytosol to cell nuclei.

Product Information

Appearance White solid

CAS No. 191282-48-1

C14H22O4

Molecular

Formula

Chemical

4-Methylene-2-octyl-5-oxotetrahydrofuran-3-carboxylic acid

Name

Molecular 515.86

Weight

Purity >98% by TLC

Targets FASN

Solubility H₂O (100 mM)

Storage and Shipping Information

Storage -20 centigrade

Shipping RT

Conditions
