Description Sorafenib (marketed as Nexavar by Bayer) is a multikinase inhibitor targeting a number of

serine/threonine and receptor tyrosine kinases. It is a drug approved for the treatment of primary kidney

cancer (advanced renal cell carcinoma) and advanced primar.

Synonyms AFR1, RAF

Product Information

CAS No. 284461-73-0

Molecular

C21H16CIF3N4O3

Formula

Chemical

Name

4-[4-[14-chloro-3-(trifluoromethyl)phenyl]carbamoylamino]phenoxy]-N-methylpyridine-2-carboxamide

Molecular

464.82

Weight

Purity > 95%

Targets Raf, VEGFR

Solubility DMSO > 112mg/mL Water >1mg/mL Ethanol > 4mg/mL

Storage and Shipping Information

Storage 4 centigrade

2 years -20 centigrade Powder 1 month -4 centigrade in DMSO More than one month -80 centigrade in Stability

DMSO

Tel: 1-631-562-8517 1-516-512-3133
