

Phospho-β-Galactosidase 1A from Lactobacillus gasseri, Recombinant

Cat. No. NATE-1409 Lot. No. (See product label)

Introduction	
<i>Description</i> <i>Synonyms</i>	In enzymology, a 6-phospho-beta-galactosidase (EC 3.2.1.85) is an enzyme that catalyzes the chemical reaction: a 6-phospho-beta-D-galactoside + H2O \rightarrow 6- phospho-D-galactose + an alcohol. Thus, the two substrates of this enzyme are 6- phospho-beta-D-galactoside and H2O, whereas its two products are 6-phospho-D- galactose and alcohol. This enzyme belongs to the family of hydrolases, specifically those glycosidases that hydrolyse O- and S-glycosyl compounds. This enzyme participates in galactose metabolism. 6-phospho-beta-D-galactoside 6-phosphogalactohydrolase; phospho-beta- galactosidase; beta-D-phosphogalactoside galactohydrolase; phospho-beta-D- galactosidase; fo-phospho-beta-D-galactosidase; 6-phospho-beta-galactosidase; EC 3.2.1.85; Phospho- β -Galactosidase
Product Information	
Species	Lactobacillus gasseri
Source	E. coli
Form	35 mM NaHepes buffer, pH 7.5, 750 mM NaCl, 200 mM imidazol, 3.5 mM CaCl2, 0.02% sodium azide and 25% (v/v) glycerol
EC Number	EC 3.2.1.85
CAS No.	37237-42-6
Molecular Weight	56.8 kDa
Purity	>90% by SDS-PAGE
Concentration	1 mg/mL
Optimum pH	6.0-7.0
Optimum temperature	40 °C
Specificity	ONPGal-6P and ONPGIc-6P
Storage and Shipping Information	

Storage

This enzyme is shipped at room temperature but should be stored at -20 $^\circ$ C.
