

## β-Glucosidase 1A from *Pectobacterium carotovorum*, Recombinant

Cat. No. NATE-1437

Lot. No. (See product label)

### Introduction

#### Description

Beta-glucosidase is a glucosidase enzyme that acts upon  $\beta$ 1- $\rightarrow$ 4 bonds linking two glucose or glucose-substituted molecules (i.e., the disaccharide cellobiose). It is one of the cellulases, enzymes involved in the decomposition of cellulose and related polysaccharides; more specifically, an exocellulase with specificity for a variety of beta-D-glycoside substrates. It catalyzes the hydrolysis of terminal non-reducing residues in beta-D-glucosides with release of glucose.
