

## Concanavalin A from the jack bean

Cat. No. CONA-0100

Lot. No. (See product label)

### Introduction

**Description** Concanavalin A (ConA) is a lectin (carbohydrate-binding protein) originally extracted from the jack-bean, *Canavalia ensiformis*. It is a member of the legume lectin family. It binds specifically to certain structures found in various sugars, glycoproteins, and glycolipids, mainly internal and nonreducing terminal  $\alpha$ -D-mannosyl and  $\alpha$ -D-glucosyl groups. ConA is a plant mitogen, and is known for its ability to stimulate mouse T-cell subsets giving rise to four functionally distinct T cell populations, including precursors to suppressor T-cell; one subset of human suppressor T-cells as well is sensitive to ConA. ConA was the first lectin to be available on a commercial basis, and is widely used in biology and biochemistry to characterize glycoproteins and other sugar-containing entities on the surface of various cells. It is also used to purify glycosylated macromolecules in lectin affinity chromatography, as well as to study immune regulation by various immune cells.

**Synonyms** Con A

### Product Information

**Source** Jack Bean

**Form** Lyophilised powder

**CAS No.** 11028-71-0

### Storage and Shipping Information

**Storage** at -20°C

**Stability** The lyophilized powder is stable for more than 3 years from production date when stored below -20°C. After reconstitution with deionized water, the solution may be stored frozen in working aliquots for up to 12 months.
