Adenosylhomocysteinase from Human, Recombinant

Cat. No. DIA-122

Lot. No. (See product label)

Introduction

Description	S-adenosylhomocysteine hydrolase belongs to the adenosylhomocysteinase family. It catalyzes the reversible hydrolysis of S-adenosylhomocysteine (AdoHcy) to adenosine (Ado) and L-homocysteine (Hcy). Thus, it regulates the intracellular S-adenosylhomocysteine (SAH) concentration thought to be important for transmethylation reactions. Deficiency in this protein is one of the different causes of hypermethioninemia. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. Adenosylhomocysteinase is an enzyme that converts S-adenosylhomocysteine to homocysteine and adenosine. This enzyme catalyses the following chemical reaction: S-adenosyl-L-homocysteine + H2O↔ L-homocysteine + adenosine. The enzyme contains one tightly bound NAD+ per subunit.
Synonyms	Adenosylhomocysteinase; S-adenosylhomocysteine synthase; S-adenosylhomocysteine hydrolase; adenosylhomocysteine hydrolase ambiguous; S-adenosylhomocysteinase; SAHase; AdoHcyase; EC 3.3.1.1; 9025-54-1; AHCY

Product Information

Source	Human
Form	Purified and lyophilized powder or Purified, solution in 50% glycerol
EC Number	EC 3.3.1.1
CAS No.	9025-54-1
Molecular Weight	47 kDa
Pathway	Biological oxidations, organism-specific biosystem; Cysteine and methionine metabolism, conserved biosystem.
Function	adenosylhomocysteinase activity

Storage and Shipping Information

Storage	-20°C
