Chitin from Crab shell

Cat. No. CHIT-001

Lot. No. (See product label)

Introduction

Description	Chitin is a kind of animal macromolecule polymer cellulose extracted from crab and shrimp shells. It is honored as "the sixth life element" by the scientific community , so European and the United State governments both identify it as a functional immune substance. Chitin is the only positive food fiber with positive electricity in the universe and widely used in industry, agriculture, medical care, beauty and cosmetics, biological engineering, etc.
Synonyms	Poly-(1→4)-β-N-acetyl-D-glucosamine

Product Information

CAS No.	1398-61-4
Purity	99.00%
