

## Antithrombin III from Human

Cat. No. CEI-1597

Lot. No. (See product label)

### Introduction

**Description** Antithrombin III is found in normal serum at 15 mg per 100 ml. Found at higher levels in plasma than in serum because of complexing with thrombin during coagulation. Functions in the inhibition of the proteolytic enzymes involved in blood coagulation and fibrinolysis, including factor Xa, plasmin, thrombin, and trypsin. Potency is strongly enhanced by heparin. Clinically, reduced levels are indicative of hypercoagulability.

**Synonyms** ATIII; Antithrombin; AT; Factor Xa inhibitor; Heparin cofactor

### Product Information

**Species** Human

**Source** Human Plasma

**Form** Lyophilized from 50 mM Tris-HCl, pH 8.0, with 150 mM NaCl.

**CAS No.** 90170-80-2

**Molecular Weight** 58000

**Purity**  $\geq 95\%$  by SDS-PAGE

**Extinction coefficient** 0.65

### Storage and Shipping Information

**Storage**  $\leq -20^{\circ}\text{C}$

**Stability**  $> 1$  year
