

6-Hexadecanoylamino-4-methylumbelliferyl β-D-Galactopyranoside

Cat. No. CSUB-0720 Lot. No. (See product label)

| Introduction | |
|----------------------------------|--|
| Description | 6-Hexadecanoylamino-4-methylumbelliferyl $β$ -D-Galactopyranoside is a specific fluorogenic substrate of galactocerebrosidase. |
| Applications | A specific fluorogenic substrate |
| Synonyms | N-[7-(β-D-Galactopyranosyloxy)-4-methyl-2-oxo-2H-1-benzopyran-6-yl]- hexadecanamide |
| Product Information | |
| Form | Solid |
| CAS No. | 94452-17-2 |
| Molecular Formula | C32H49NO9 |
| Molecular Weight | 591.73 |
| Substrates | Esterase |
| Storage and Shipping Information | |
| Storage | Store at -20° C |
