Siberian ginseng extract

Cat. No. EXTC-202

Lot. No. (See product label)

Introduction

Description	Siberian ginseng is a shrub native to the Far East that grows 3 - 10 feet high. Its leaves are attached to a main stem by long branches. Both the branches and the stem are covered with thorns. Flowers, yellow or violet, grow in umbrella-shaped clusters, and turn into round, black berries in late summer. The root itself is woody and is brownish, wrinkled, and twisted. Siberian ginseng (Eleutherococcus senticosus), also known as eleuthero, has been used for centuries in Eastern countries, including China and Russia. Despite its name, it is only a distant relative of American (Panax quinquefolius) and Asian ginseng (Panax ginseng), and it has different active chemical components. The active ingredients in Siberian ginseng, called eleutherosides, are thought to stimulate the immune system.
Applications	Functional food, health care products and pharmaceuticals.

Product Information

Appearance	Brown-yellow powder
Purity	0.8%, 1.0%, 1.2%
Function	Anti-knub. Anti-aging. Resisting inflammation. Expanding blood vessel, improving brain blood supplying, reducing and adjusting blood pressure, curing coronary heart disease. Having curative effect on neurasthenic and insomnia. Having notable curative effect on neurasthenic, improving sleeping heart-throb, bad memory etc.
