Soy protein

Cat. No. EXTC-218

Lot. No. (See product label)

Introduction

Description

Soy protein is a protein that is isolated from soybean. Soya protein is made from soybean meal that has been dehulled and defatted. Dehulled and defatted soybeans are processed into three kinds of high protein commercial products. Soy protein is a vegetable protein. Amino acid composition of soybean protein and milk protein is similar, in addition to methionine slightly lower, the rest of the essential amino acid content are more abundant, is a plant of the full protein, in nutritional value, can be equated with animal protein, the gene structure is also the most close to human amino acids, so it is the most nutritious vegetable protein.

Applications

1. It can be used to raise the yield of meat products. 2. It can be added to such solid drinks as oatmeal, coffee mate, soy milk powder peanut milk powder, cocoa milk powder, walnut milk powder, fermented yogurt, juice milk powder, etc. 3. It can also be added to cold drinks (such as ice cream) to reduce the production costs.

Product Information

Appearance

Light yellow powder

Function

Soy protein plays a very important role in the reasonable nutrition, balanced diet and improving diet structure.
