Enzymatic Assay of PENICILLIN AMIDASE
Insolubilized Enzyme

PRINCIPLE:

Benzylpenicillin $+ \text{H}_2\text{O} \xrightarrow{\text{Penicillin Amidase}} 6$-APA $+$ Phenylacetic Acid

Abbreviation used:
6-APA = 6-Aminopenicillanate

CONDITIONS:  $T = 37^\circ\text{C}$, $\text{pH} = 7.8$

METHOD:  Titrimetric

REAGENTS:

A.  50 mM Sodium Phosphate Buffer, pH 7.8 at $37^\circ\text{C}$
   (Prepare 100 ml in deionized water using Sodium Phosphate, Monobasic, Anhydrous.)

B.  4.0% (w/v) Penicillin-G Solution (PEN-G)
   (Prepare 10 ml in Reagent A using Penicillin-G, Procain Salt.)

C.  500 mM Sodium Hydroxide Solution - Standardized (NaOH)
   (Prepare 100 ml in deionized water using Sodium Hydroxide, Anhydrous,
   Standardize according to the ACS Reagent Procedure.\(^1\))

D.  Penicillin Amidase Insolubilized Enzyme Suspension
   (Prepare by suspending 200 mg of Penicillin Amidase, Insolubilized Enzyme, attached to
   macroporous oxirane acrylic beads (07628) in 20 ml of Reagent A. Filter through a 0.45 $\mu\text{m}$
   filter. Resuspend the filtered insoluble enzyme in 20 ml of Reagent A.)
Enzymatic Assay of PENICILLIN AMIDASE
Insolubilized Enzyme

PROCEDURE:

Using a suitable pH meter in conjunction with a magnetic stirrer, pipette (in milliliters) the following reagents into a suitably thermostatted titration vessel:

<table>
<thead>
<tr>
<th></th>
<th>Test</th>
<th>Blank</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reagent D (Enzyme)</td>
<td>20.00</td>
<td>------</td>
</tr>
<tr>
<td>Reagent A (Buffer)</td>
<td>------</td>
<td>20.00</td>
</tr>
</tbody>
</table>

Mix by stirring at 37°C for 30 minutes. Then add:

| Reagent B (Pen-G) | 1.00   | 1.00 |

Immediately adjust to pH 7.8 with Reagent C (NaOH) using a burette.

Run the reaction for 1 – 5 minutes. Record the time when the pH reaches 7.8. Maintain the pH of the reaction mix at pH 7.8 by the addition of small volumes (0.05 ml) of Reagent C. Record the volume of Reagent C used to maintain the pH at 7.8 and the time required.

CALCULATIONS:

$$\text{(NaOH)} = \text{Volume (in milliliters) of Reagent C required to maintain the pH at 7.8.}$$

$$\text{Units/g enzyme} = \frac{\left[\text{(NaOH) Test - (NaOH) Blank}\right](M)(1000)}{(T)(0.2)}$$

$M = \text{Molarity of Reagent C}$

$1000 = \text{Conversion factor from millimoles to micromoles}$

$df = \text{Dilution factor}$

$T = \text{Time (in minutes) required to maintain the pH at 7.8 as per the Unit Definition}$

$0.2 = \text{Weight (in g) of solid penicillin amidase insolubilized enzyme used in the assay}$

UNIT DEFINITION:

One unit will hydrolyze 1.0 µmole of benzylpenicillin per minute at pH 7.8 at 37°C.
Enzymatic Assay of PENICILLIN AMIDASE
Insolubilized Enzyme

FINAL ASSAY CONCENTRATION:

In a 21.00 ml reaction mix, the initial concentrations are 50 mM potassium phosphate, 1.9% (w/v) penicillin-G, and 200 mg penicillin amidase insolubilized enzyme.
