Dendrobium Extract

Dendrobium is a genus of mostly epiphytic and lithophytic orchids in the family Orchidaceae. It is an enormous genus, containing over 1,800 species that are found in diverse habitats throughout much of south, east, and southeast Asia. Some Dendrobium species are cultivated as medicinal plants.

Product Overview

Dendrobium contains several chemicals, and some may have effects on the body. They may lower blood pressure, increase blood sugar, and reduce pain. They may also increase the chance of seizures. However, none of these effects have been studied in humans. Therefore, the effects of dendrobium on the human body are not clear. Creave Enzymes provides natural dendrobium extract for scientific research.
